# BIO- DEGREDEABLE COCONUT POT

Coco coir is a natural waste product of the coconut plant and is perhaps the most versatile of all organic growing mediums. As an environmentally friendly alternative, coco coir has a natural resistance to diseases and provides excellent water retention as well as aeration to plants.

Bio-degradable means, simply dig and transplant the whole pot into the ground or re-pot to bigger container, without the hassle of coiling and tangling of roots. The pot will disintegrate all by itself.

## 100% Organic

A renewable resource  
uniform in composition, odourless  
and pleasant to handle

## Good drainage

Good aeration  
High water holding capacity,  
great absorption

## Strong root growth

Natural and renewable resource,  
absorb water readily and re-wets  
easily, thus reducing the need  
for waters

# HOW IT'S MADE

We are based in Tabanan, Bali. All of the coconut waste are collected from all shores of Bali and ready to be deployed all the over the planet.

1. Collecting the coconut fiber waste

2. Spraying with our compostable glue

3. Preparing the glued coco fiber to our roll machine

4. Rolling the coconut fiber

5. Drying the coconut fiber under the sun

6. Cutting the coconut fiber into pieces

7. Processing the coconut fiber with our press machine

8. Shaping by cutting the coconut fiber into pot sizes

9. Applying our compostable glue to our coco pot

10. Letting our coco pot to dry under the sun

Our Coco Pot is done!

# COCOPOT

Pots as growing medium has been introduced since the beginning of history, not only in Indonesia, but all over the world. Pots has decorate the many houses and gardens of families and folks around the planet.

But did we realize that 90 percent of pot materials are plastic-based? Even in the nurseries all the polybags are still made of plastic. It's a dilemma where countries and islands campaign hard on reducing waste yet their agriculture industry is still filled with plastics for nursing the baby plants.

That's why KELAPOT is born, as a small solution to reduce the use of plastic. We are a 100 percent Indonesian product, and we utilize the abundance of coconut waste that piles up on all the shores of Indonesia.

## Cocopot Classic

Diameter : 15 cm  
Height : 15 cm  
Bottom : 9 cm

## Cocopot Medium

Diameter : 12 cm  
Height : 12 cm  
Bottom : 19 cm

### Advantages of using our Cocopot :

- 100% made in Bali.
- 100% Organic.
- The coco fibers are 100% waste. A sustainable material.
- Uniform in composition and has an earthy color.
- Odorless and easy to handle.
- Excellent drainage
- Excellent aeration
- Effective in keeping water.
- As the fiber expands roots can grow more healthily.
- Durable as an indoor or even outdoor growing media.

# COCOPOT CLASSIC

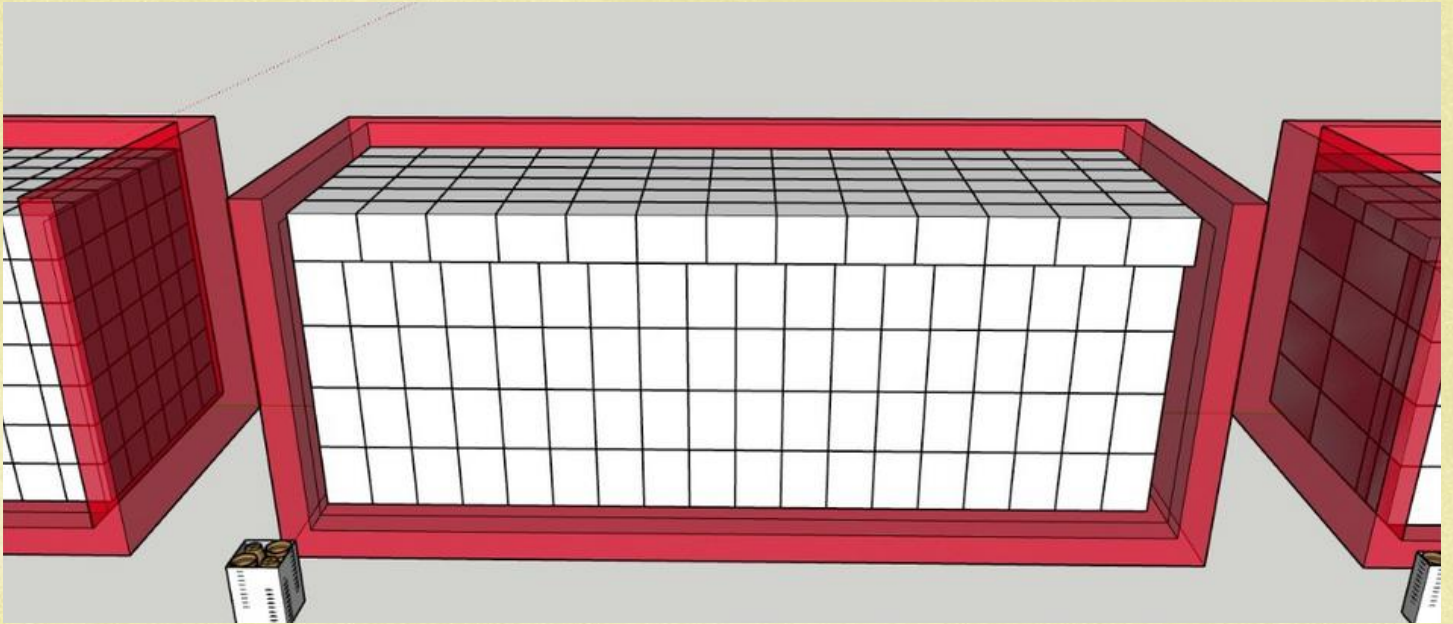

*\*All prices will depend on the current global currency\**

Weight : 150 gram

# MAXIMUM SHIPPING per Container

## Cocopot Classic

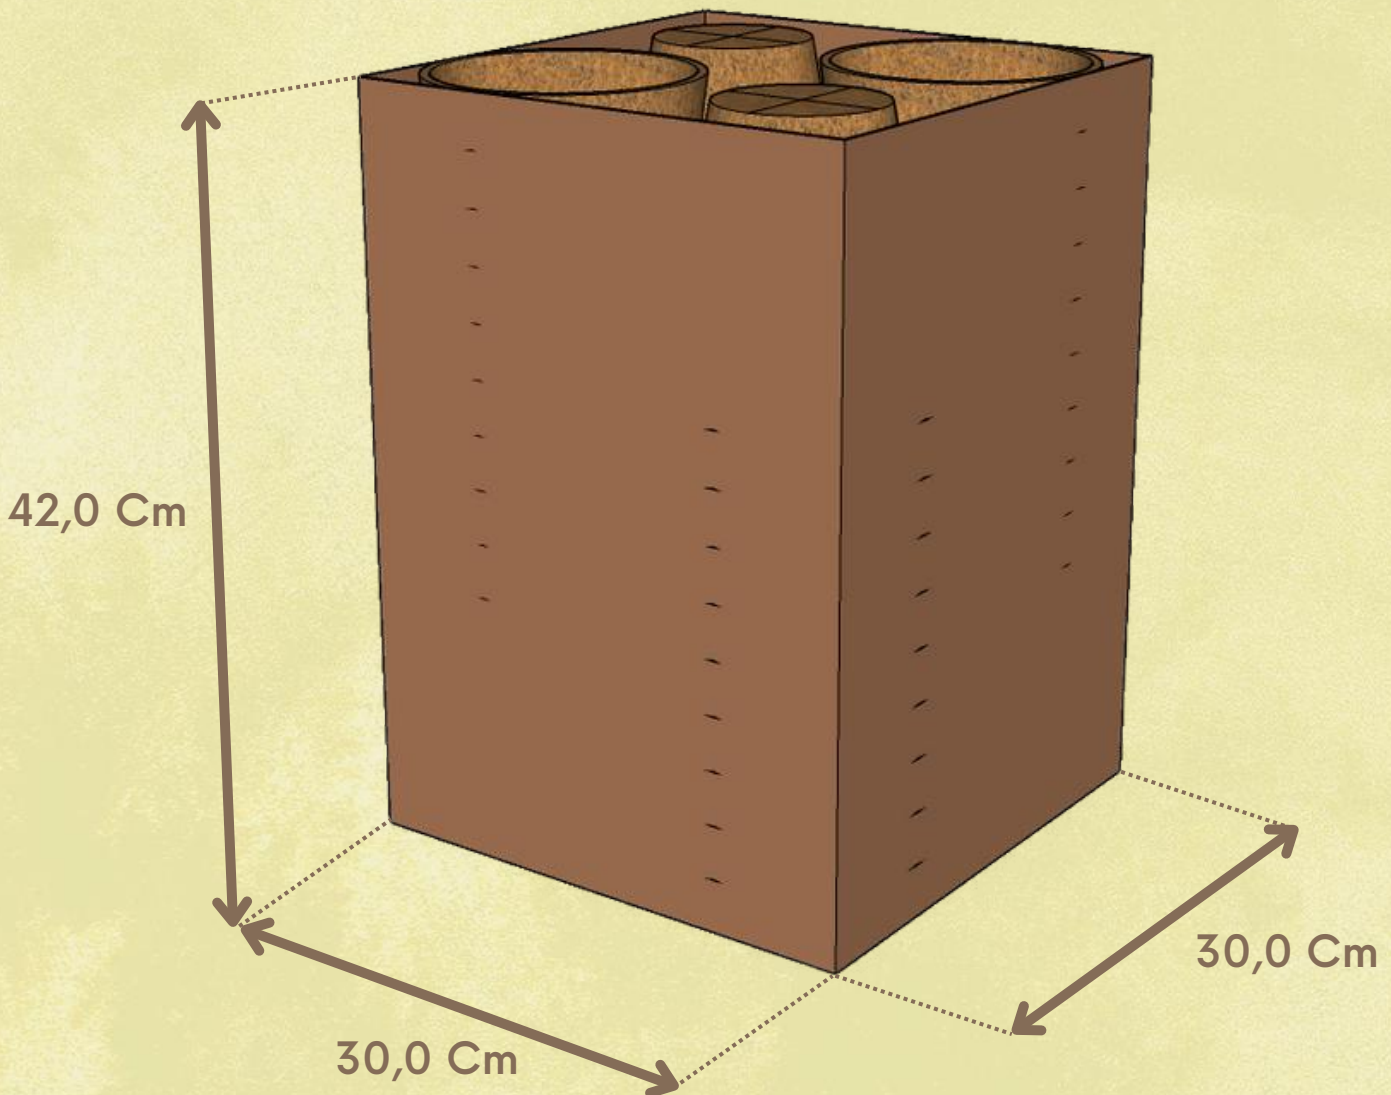

Amount per Pack	: 40 pcs
Pack Dimension	: 30 x 30 x 42 cm
Container Size	: 589 x 235 x 236 cm (20 feet)
Pack per Container	: 510 packs
Total Amounts	: 20.400 pcs
Total Weights	: 3,64 Ton

# PACKAGING

Cocopot Classic & Cocopot Medium

Weight : 785 gram

*\*packaging materials can be customized as requested\**

*\*Prize can be changed depends on the materials\**

Dreaming of saving the world! One pot at a time!
